that server still exists but I delisted it and never upgraded it, it's still running the same server code from 2019

it can't be accessed from slither.com due to the allowed websocket domains not being updated since 2019

you can only access it from slither.io domain

and the reason the game just sits there after you die is because it normally needs to communicate something with the central command server before kicking you back to the game menu, but it isn't connected to the central server anymore

Nagle is still enabled on it

@Hypah does the shrinking kiosk penalty ever stop or does it keep going? I saw a guy go from 29k to 8k and stopped

spectre  11/24/2024 3:15 AM

yea the script which caused lag before

Hypah  8/4/24, 7:59 AM

they fixed a lag bug caused by an evil man
named John Nagle
